### General Introduction

Since the foundation of the People's Republic of China 60 years ago, especially during the past more than 30 years of reform and opening up, a rapid elevation has been achieved in the country's food scientific research level, which promotes the rapid growing up of food industry that is becoming one of the fastest-growing and the most vigorous industries in the domestic economy development and makes great contributions to raising living standards in urban and rural areas, driving the development of related industries, increasing employment, propelling the increase in peasant income, etc. Nowadays, food industry has become one of the key industries in the country's domestic economy, and plays a crucial role in the economic and social development. Despite constantly increased spending on food scientific research, the country's research level lags far behind developed countries in the world in many related fields due to later start of food science discipline as well as lack of depth of basic theoretical research and creativity of scientific research projects. However, to elevate the country's food science research level to a new height is a challenging task. Besides the introduction of overseas high-level scholars, cultivation of academic leaders and purchase of advanced instruments and equipment, the key basic research of food science should be directed.

We have had the past five food science international symposia successfully held in China. Now, the 6th Food Science International Symposium, August 5–11, 2010, Beijing, China, has won the great honor of sponsorship of ICC, AACC, *Journal of Food Science*, *Journal of Agricultural and Food Chemistry*, *Food and Bioprocess Technology* and the vigorous supports of College of Food Science and Nutritional Engineering, China Agricultural University and Beijing Technology and Business University. The symposium will explore in depth key basic research of food

science involving cereals and oils, meats, dairy foods, aquatic foods, egg foods, fruits and vegetables, functional foods and food additives and natural products as well as food biotechnology and food safety so as to provide an opportunity to communicate advanced experience and lay out the latest research accomplishments and meanwhile lay the foundation of an industry-university-research cooperation platform that paves the way for the country's food science research and industry development towards a new milestone.

More than 500 scientists, professors, entrepreneurs, technicians and engineers from all over the world, dedicating themselves to the research of processing and safety of agricultural product and food are expected to attend the 6th Food Science International Symposium to deeply exchange their ideas and extend their work accomplishments. A technical tour will be followed.
